1.

Prospects of Homeopathy in Veterinary Medicine in India

J.P. Varshney

*Division on Medicine, Indian Veterinary Research Institute,
Izatnagar - 243 122, U.P. (India)*

SUMMARY

Homeopathy has emerged as an effective complementary and alternative medicine in veterinary practice. Its development, importance in organic farming and disease management, types of homeopathic therapies, advantages of homeopathy has been discussed. Summary findings of some of the researches conducted on homeopathic combination remedies at Indian Veterinary Research Institute have also been given to appraise the research developments in homeopathic medicine. It appears that homeopathy will find place in holistic management of diseases in human and veterinary practice in times to come.

INTRODUCTION

Veterinary Medicine has followed in the footsteps of Human medicine. High cost of the modern medicines, their inherited side

effects and problems of antimicrobial residues in animal products have caused an apparent discomfort to animal owners invoking their interest in alternative approaches of animal health care. Further unorganized animal sector, particularly in the hands of poor marginal farmers or landless labours below poverty line, in developing and/or undeveloped countries urges for a cheaper, ecofriendly, safe, effective and scientifically proven complementary alternative animal health care approach atleast as a 'firstline therapy". It is high time that a holistic approach integrating best and time tested components of different systems of health care, are integrated. Amongst alternative approaches, Homeopathy is widely accepted as a complementary and alternative approach and is probably in vogue for around 200 years. It is being practiced in the countries of European Union Viz. Austria, Belgium, Denmark, Finland, Germany, Greece, Iceland, Ireland, Israel, Netherlands, Norway, Portugal, Sweden, Switzerland and United Kingdom. European Union Committee has also urged recently to cut the use of antimicrobials in human as well as veterinary practice to an essential minimum level for maintaining the effectiveness of antimicrobials and to deal with the problems of emergence of resistance among microbes. Recently American are also inclined to encourage the use of Homeopathic drugs in the management of animal diseases. Indian scenario is also no way different. In this country many Veterinarians are using homeopathic drugs in the management of animal diseases, though lacking in proper planning and execution. That makes the claim of miracle cure unacceptable.

HOMEOPATHY AND ORGANIC FARMING

There is an increasing concern about the use of antibiotics, other anti-microbial products, and growth promoters in farming industry. Growing resistance to anti-microbials, and emergence of resistant strains of micro-organisms to multiple antibiotics has led to increasing difficulties in the treatment of diseases such as

MAMMILITIS / THELITIS

Is a viral infection affecting teats of buffaloes more and also in cows, without having any change in milk. The symptoms are ulcers and its consequences like denudation of teats.

Treatment must be started at the onset itself.

REMEDIES

Hep. 1M every 3hrs alternate with Lach. 30C if teats are puffy, purple and hot or Led. 30C if teats are puffy purple and cold.

To complete the cure SSC (Sulph. 30 + Sil. 30 + Carb-v. 30).

DOWNER COWS

Animals that were not responding to the routine therapies are seen responding to homeopathic remedies frequently.

REMEDIES

Arn. 200C, Rhus-t. 200 C, Bry. 200C can be used alternatively at 1 hr interval for 2 - 3 days supportive of lumbar area hastens the recovery. This line of approach has been found effective in dogs with paraplegia.

Cow pox: Ant-t. 30 alternated with Vario. 200 TID for one week.

BLOOD IN MILK, ROSE MILK, AND BLOODY MILK

Cham. 30 alternated with Ipecac. 30 TID if the udder is painless. If painful Merc-c. alternated with Ipecac is better.
