 TENSE. RHOEO-RHEUMATIC-PECTORAL

**RESEMBLANCES BETWEEN CHARACTERS OF PLANT AND
REMEDY**

PLANT	REMEDY
1. Grows in wet places depicting biological thirst.	Increased thirst to redeem off dryness.
2. The roots and stems are succulent (juicy).	Thirst for large quantity to maintain the moisture; sodden a characteristic.
3. Root is firmly anchored in the ground.	The person seeks stability in life. Perseverent.
4. The fresh root contains the active material —an alk aloid —Bryonicin.	'Dryness' observable through and through.
5. Contains two glycosides Bryonin and Bryonidin.	Craves sweets, ice-cream; < fasting; hypoglycemic action.
6. Hair on the leaves protect the plant from excessive perspiration.	< warmth; damp weather induce more sweating and consequent 'drying effect.'
7. The succulent long stems are not able to hold the plant erect.	< Erect position, sitting up= nausea, fainting etc. Muscles of nape and lumbar more affected.
8. Spiral tendrils of the plant are sensitive to touch.	< Touch. Mind-sensitive.
9. Tendrils coil to make a hold secure.	Wants to hold a 'secured' position in life. The person will lean on, grasp firmly and drain and dry out its environment to serve his own needs
10. The plants dries out its environment with great energy for survival.	

Make-up : Gastro-hepato-rheumatic. Gouty. Black hair, dark complexion, firm muscular fibre, dry, sallow, spare, wiry, slender, nervous (*Alum.*). Or venous, plethoric, heavy and lazy. Tendency to leanness. Medithermal: hostile to either too hot or too cold (air or foods).
