Carnegia Gigantea

Introduction

Proving Introduction

A proving of Saguaro Cactus (*Carnegia Gigantea*) performed in Phoenix, Arizona in the fall of 1997 consisted of 15 subjects who began taking the remedy on September 4th, 1997. The mother tincture was obtained from a specimen of the flower collected by Eileen Nauman in Cottonwood Arizona and the remedy potentized to a 30C potency. The subjects were instructed to take a single daily dosage for a maximum of three days but to stop after the appearance of any symptoms.

Participants journaled their symptoms over the next month. Symptoms were reviewed in a videotaped exit group meeting one month later and journals reviewed separately. Participants who had residual symptoms or improvement following the one month interval were followed until the symptoms resolved.

The proving was conducted by Dr. Todd Rowe MD (H), CCH, DHt, and supervised by Yolande Grill and Louise Sanchione.

This booklet introduces cactus remedies with emphasis on the saguaro cactus and presents the detailed account of this saguaro proving.
