Foreword

In the daily homoeopathic practice the important thing is not only to find the correct remedy but especially in chronic cases, which have already been treated or in which an additional remedy has to be prescribed, we often stand before the question, which remedies complement, exclude themselves or may even antidote. This important information is not always available with specific details in all homoeopathic *materia medicas*. In the literature they are not often mentioned, and when, are often contradictory. There was indeed a real need for a comprehensive work on this subject. A. Rehman has researched these relationships for each remedy in very laborious work with intensive study of the source materials and compiled them together very well with reference to the relevant literature.

Whenever it was possible, he added appropriate miasma, the side relationships, the duration of action and comparable remedies to the tables. Furthermore there are remarks about the foods to be avoided and important tips for the practical application of remedies.

The innovative contribution of this work to the subject is that it gives parenthetical comments indicating in what way certain remedies are complementary, related or follow well with appropriate references.

In this way a real treasure box of important information on remedy relationships for the practical homoeopath has emerged, from which he can obtain help in his daily practice. The book can and does not intend to replace a *materia medica* but functions as an excellent supplement to it, a useful guide for second prescription and a rich source of pathognomonic symptoms with excellent comparison of different remedies. Therefore it will certainly find many friends.
