**Treatment :**

- (1) If Pterygium is stationary for atrophic stage and not much disfiguring, no treatment is necessary.
- (2) In progressive pterygium, the surgery is required.

**(ii) Myopia :** It is the error of refraction in which the parallel rays of light from infinity come to a focus in front of retina, when accommodation is at rest.

**Types of Myopia :**

- (1) Axial myopia
- (2) Curvature myopia
- (3) Index myopia

**Clinical types :**

- (i) Congenital myopia
- (ii) Simple myopia
- (iii) Pathological myopia

**Ophthalmoscopic findings :**

- (a) Myopic crescent.
- (b) Chorio-retinal atrophy.
- (c) Atrophic patches in the macula with sclerosis of choroidal vessels.
- (d) Ectasia of sclera at the posterior pole known as *posterior staphyloma*.

**Symptoms of Myopia :**

- Reduced visual acuity.
- But near objects seen clearly.

- The patient may complain of seeing black spots floating in front of eyes due to vitreous opacities.

**Treatment :** By concave lens of suitable power.

**(iii) Leucoplakia :** Leucoplakia is the appearance of white patch usually on the cords and may look like a small prominent patch or a nodular plaque.

The lesion may be single or multiple. Leucoplakia is generally associated with hyperkeratosis.

- Causes**
- Idiopathic
  - Tobacco chewing

**Prognosis** - Leucoplakia is premalignant dysplasia.

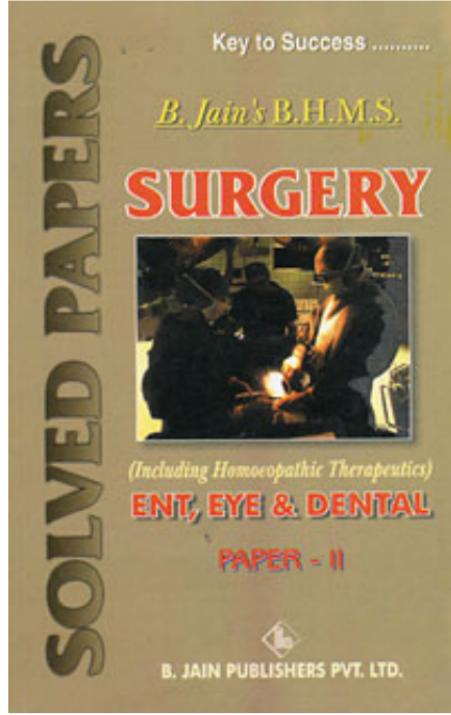

**Treatment** - Microsurgical excision.

**(iv) Pyorrhea :** Pyorrhea is an inflammatory infective condition of the gums and the membranes covering the teeth, in which there is a discharge of pus from teeth sockets or a collection of pus between the teeth and the gum margins.

**Causes** - The most frequent single cause of gingivitis (Pyorrhea) is poor dental hygiene with a buildup of dental plaque around the base of the teeth. Other localised causes include tartar (calcified plaque), food traps between teeth and ill-fitting dental plates, caps or crowns. The gum inflammation that often develops during puberty or pregnancy is thought to be aggravated by hormonal factors. Gingivitis may also be a symptom of general illness (for example, in Diabetes Mellitus and Leukemia) and malnutrition (especially in scurvy and pellagra-Vitamin B<sub>3</sub> deficiency).

#### **Complications :**

- (1) Bleeding from gums.
- (2) An perverted taste due to pus in mouth.
- (3) Recession of gums and loosening of teeth.
